The Pakistan: Attack Link Analysis (ALA): Jan. - Jun. 2011 Chart v1.0 shows all reported attacks by terrorist and rebel groups in Pakistan for the first half of 2011. It covers 733 attacks linked to 217 geographic reference points. The chart contains easily definable links from province to district to city/tehsil/area, based on thickness of line, and links from incident to terrorist/rebel group responsible, based on a red line. Each of the attacks is represented by an icon, color-coded by month. Each incident icon contains an IntelCenter Database (ICD) identification number, number of people killed and number of people injured. The ICD contains the full description of each incident.
